SURVIVAL STRAW

5000 GALLONS

Item # 701013

Description: Complete water purification system in a straw.

Information

The Survival Straw is not a filter! It is a highly efficient water purification system that destroys harmful bacteria and viruses that exist in most sources of water. Unlike a typical filter which attempts to trap impurities, the Survival Straw eliminates them.

A single Survival Straw can process over 5,000 gallons (This is a claim by the manufacturer that is not verified) - that's a lifetime of pure water. Compare this to a typical carbon filter which has to be replaced about 30 days after initial use.

A Remarkable Breakthrough in Water Purification

- Destroys E.coli, giardia, cryptosporidia
- Removes Ethylene Dibromide, EDB, Iron, Mercury, Chlorine, Radon, Pesticides, Herbicides, Arsenic, Cobalt, bad taste and odor
- 100% Alloy Media No Silver or Carbons
- Long Lasting
- Eliminates Heavy Metals
- Eliminates Carcinogens
- Meets FDA Standards. EPA Est. 67814-FL-001
- Certified Bacteriostatic Device
- Lifetime Replacement Guarantee
- Patent Pending
- Lifetime replacement guarantee from the manufacturer

Certified to destroy greater than 99.99% of most bacteria, Certified to remove greater than 99.99% of ethylene dibromide (EDB), Destroys greater than 99.99% of microorganisms including E.Coli, cryptosporidium and giardia lamblia cysts.

TO USE: Can be used by bikers, hikers, travellers, campers, or any active person that is in a place where the water source is unknown. Excellent for emergency kits. Simply immerse the straw directly into the water source and drink through the straw as you would any other straw. It is recommended that you use 20 drops of Aerobic Oxygen in the water source in conjunction with the Survival Straw for extended results.

TO CLEAN: No filters to replace. To flush, raise the straw above the water line and blow through the straw to remove excess water.
