Magnetic Therapeutics

ELBOW WRAP
(S, M, L, XL) #59674-

Description: Flexible & Gratifying Powerful 1200 gauss anisotropic magnets work in conjunction with each other to provide negative magnetic energy to the entire elbow area. This wrap offers flexibility with tremendous results. Available in four sizes.

Contents / Ingredients

Magnet Power

Today there is a re-awakening to the use of magnetism in the field of therapeutics. Through innovative design and revolutionary application Bio-Magnetism is finding an ever increasing niche in the health care field of many countries throughout the world. Good for You Corp. has researched and developed the most advanced and effective line of magnetic health products in North America.

Healing Magnets have become an overnight attraction in the medical world. Their powerful effect in banishing pain from thousands of patients is being hailed as a major breakthrough.

For years, U.S. doctors sneered at their use -now they're rushing to use magnets on patients to rid them of agonizing pain and speed healing.

Magnets are even being used to cure cancer, to speed up diagnosis, end the pain and stiffness of arthritis and to treat digestive, nervous and urinary systems.

Pain -from whiplash to sprained ankles and twisted knees- can be eased by magnets, says Dr. Robert Vance, a Las Vegas physician.

"Injured tissue emits a positive magnetic charge," he says, adding that the body itself counters that damaging positive charge with healing negative energy.

But, in the meantime, magnifying that healing energy with magnets applied to the injured area can prevent permanent damage and boost the body's natural healing powers. Even a bad burn will respond to magnetic energy, Vance says.

"One of my patients was taking a turkey out of the oven and spilled hot grease on her hands," Vance recalls in the Health & Healing newsletter.

"She applied a magnet to her hand for 20 minutes. Afterward, she told me, there was no redness, blisters or pain."

In their book *The Magnetic Effect*, Dr. Walter Rawls and the late Albert Roy Davis -who discovered that north and south poles of magnets emit different energies- revealed that placing the north pole of a magnet against painful areas relieves pain.

At the Albert Roy Davis Research Laboratory in Florida, their pioneering experiments in hundreds of cases showed that north pole energies can be used "in nearly all cases where pain is present."

Traditional Therapeutic Action

CAUTION: Magnets should not be used with pacemakers. Computer disks, credit cards or recording tapes can also be erased by close contact with magnets.
